Treatment relies on high-frequency sound waves to help you lose inches, without causing any bodily trauma. However skin reacts differently to the treatment which can either result in mild bruising. However, ultrasonic cavitation is the painless treatment and does not require any type of anesthesia.

Results are often visible right away – sometimes, you can see a difference immediately after your very first treatment. Optimal results begin to show in as little as three days. Depending on your individual body composition, you may need six to twelve treatments in order to achieve your goals.
